INTRODUCTION

CHALLENGING THE STATUS QUO'S VALUE WITH A DECENTRALIZED MARKET SENTIMENT.

Economix is a decentralized evaluation ecosystem, a rating discovery platform for assets, which aims to maximize ROI and lower risks, based on crowd AI.

Traders, private investors, investment funds and financial institutions can use Economix to get real time market sentiment and financial estimates, in a transparent and effective smart method, in order to make educated decisions, instead of gambling on the market direction, in the growing crypto economy.

ECONOMIX RATING

Gain live market sentiment and price movements to maximize ROI and lower risks.

ECONOMIX FORECAST

Get real-time assets' forecast and market edge benefits.

ECONOMIX PORTFOLIO

Achieve performance rewards on your portfolio management skills and ROI.

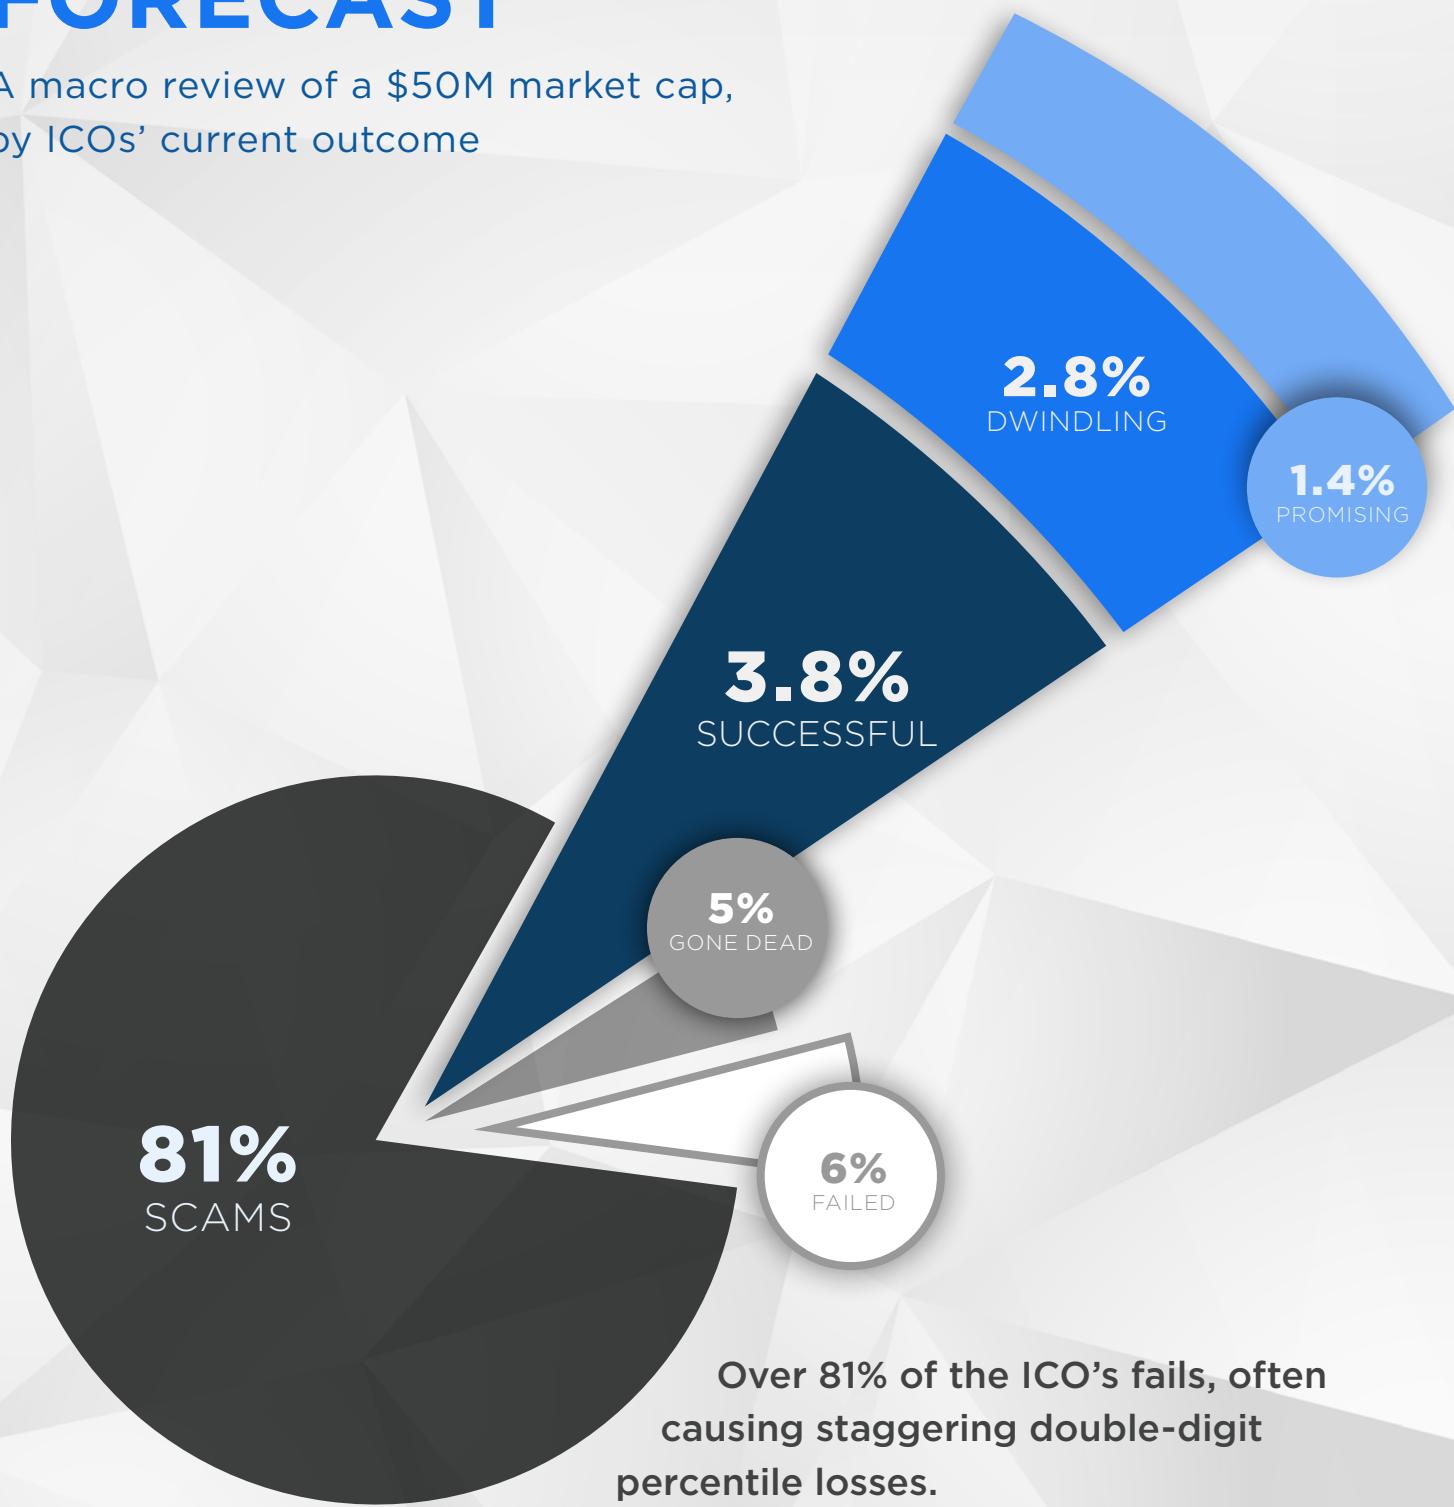

ECONOMIX TRADE

Enjoy full featured platform, with state of the art tools, for investors to easily trade on crypto assets.

REDEFINING VALUE A DECENTRALIZED MARKET SENTIMENT

Economix drives the market sentiment into a transparent ecosystem, designed to give a solution to the unregulated crypto growing market, which rapidly changes 24/7 and requires constant attention.

Economix's protocol uses a wide range of indicators to reveal the positive and negative market sentiment, market forecasts and financial data.

The total lack of official sources, providing reliable and up to date assets' information (i.e. Bloomberg), makes it a great challenge to estimate the market's value. Rampant FUD, manipulations and insider trading distort the asset's real status and make it even harder to analyze or predict future outcomes.

The counterparty risk, also known as the default risk, which the crypto community has to face, causes complete work to go unrewarded. There is also an increasing amount of fraud in the ICO field, which consequently gives rise to insecurity within the investor community.

In such chaotic markets, with no regulations and lack of transparent information, it is hard to make quick effective decisions for an optimal trading. Economix market sentiment protocol presents the crowd's psychology in the decentralized market tone, as it reveals through the public's activity, AI / BI data and the assets' trading price movement.

HARNESS THE MASS INTELLIGENCE RATING THE MARKET TOGETHER

The more predictions, the greater your wealth.

In order to cut through noise, Economix engages the crypto community with paid information evaluation opportunities. In a decentralized knowledge market-place, everyone has a chance to participate in a transparent way and get rewarded, based on the accuracy of their forecasts.

Economix aims to become the most reliable source of information, the “Bloomberg of crypto” so to speak, where every new member increases the accuracy of the market sentiment’ information.

THINKING DIFFERENTLY APPROACH AND BENEFITS

By stepping into the community, we establish a “hive mind” of experts, that brings congruous data and indicators to the requested assets

We allow quantitative investors like hedge funds and investment banks to:

- create the most suitable dataset for their investment projections;
- use systematic strategies for intermediate-term and long-term investments.

We allow discretionary investors, like investment managers and institutional investors (pension funds) to:

- manage risks and identify opportunities around earnings announcements;
- buy and sell crypto in an easy and safe manner;
- get full and transparent information without wasting valuable time.

Academic researchers can:

- create datasets for academic research;
- answer questions using crowd wisdom about digital asset' pricing, abnormal investment announcements, etc.

And analysts can enjoy:

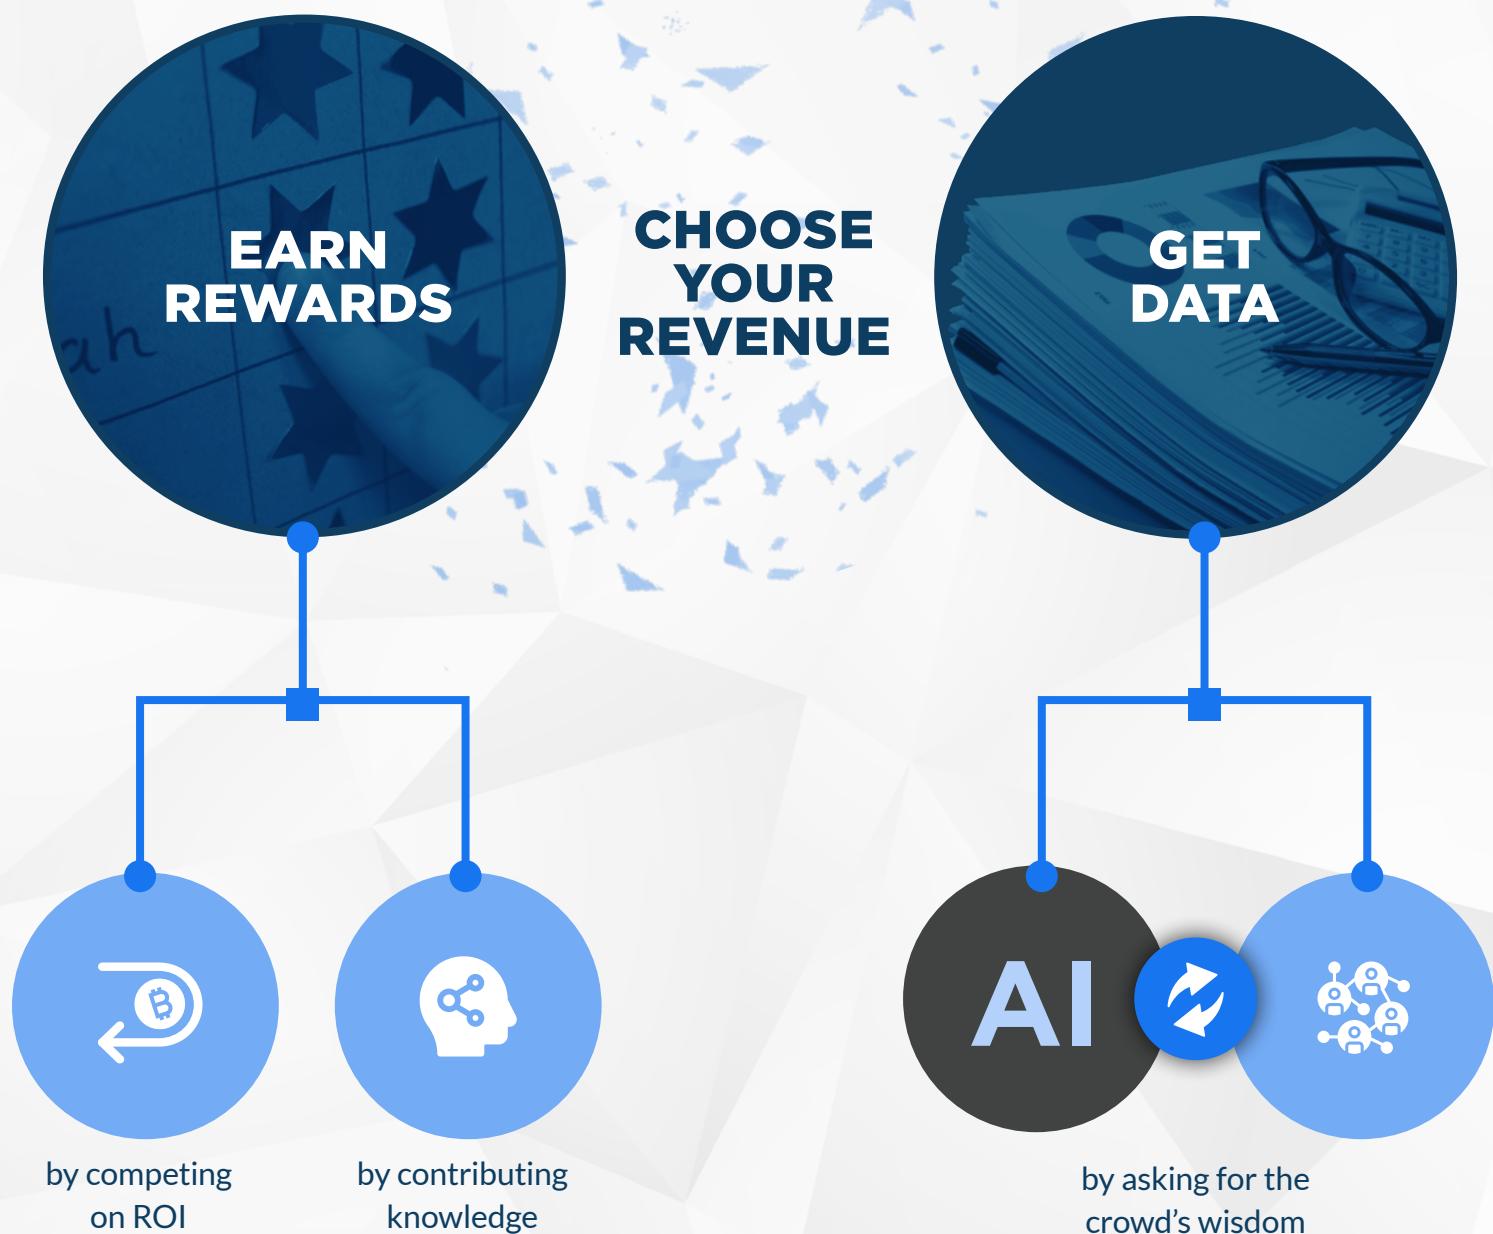

- openness and accessibility: projects and market analyses being clearly stated and the information is available;
- rewards for making analyses.

HOW DOES IT WORK FOR YOU?

Economix streamlines the crowd's addressing, enabling posting questions about various assets. The public submits its opinion in a transparent and decentralized manner, stored in the blockchain for future audits and forecasters are being rewarded according to their relative accuracy.

Economix is a complete ecosystem platform that supports the development of the

community and rewards social activity, by means of a fair, sophisticated system which objectively reflects the contribution of each participant. The actual section on public opinion is stored in the blockchain, thereby ensuring the openness and invariability of the results obtained. By combining crowd wisdom with artificial and business intelligence to rate projects and market forecasts, Economix solves the inaccuracy problem.

MAKING IT HAPPEN ROADMAP

2017 ►

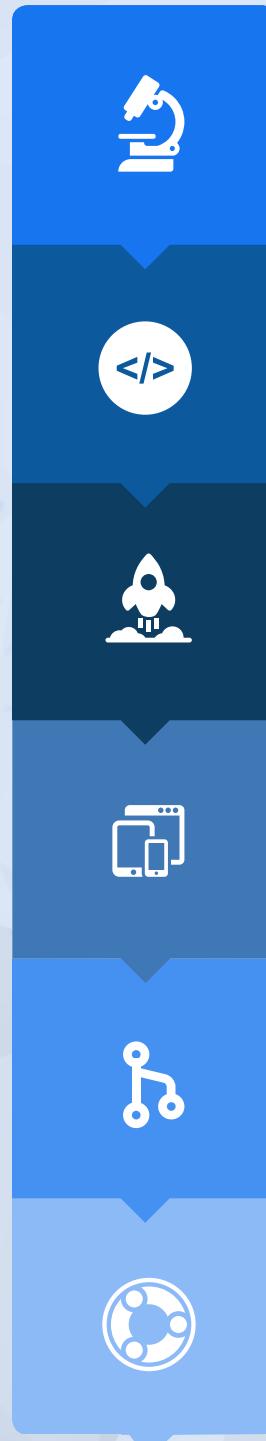

- A market analysis of forecasting, crowd sourcing and rating services.
- Research & study of the markets' dynamic developments.

Q4 2018 ►

- Demo version implementation (rate and forecast)
- Reward system testing.
- Development of the experts' community.
- ICO launching.

Q3-Q4 2019 ►

- Launch of Beta version (implementation of blockchain and portfolio sharing).
- CopyTrade implementation.

◀ Q1-Q3 2018

- Development of mathematical and forecasting evaluation models.
- White paper publication.
- Establishment of R&D department.

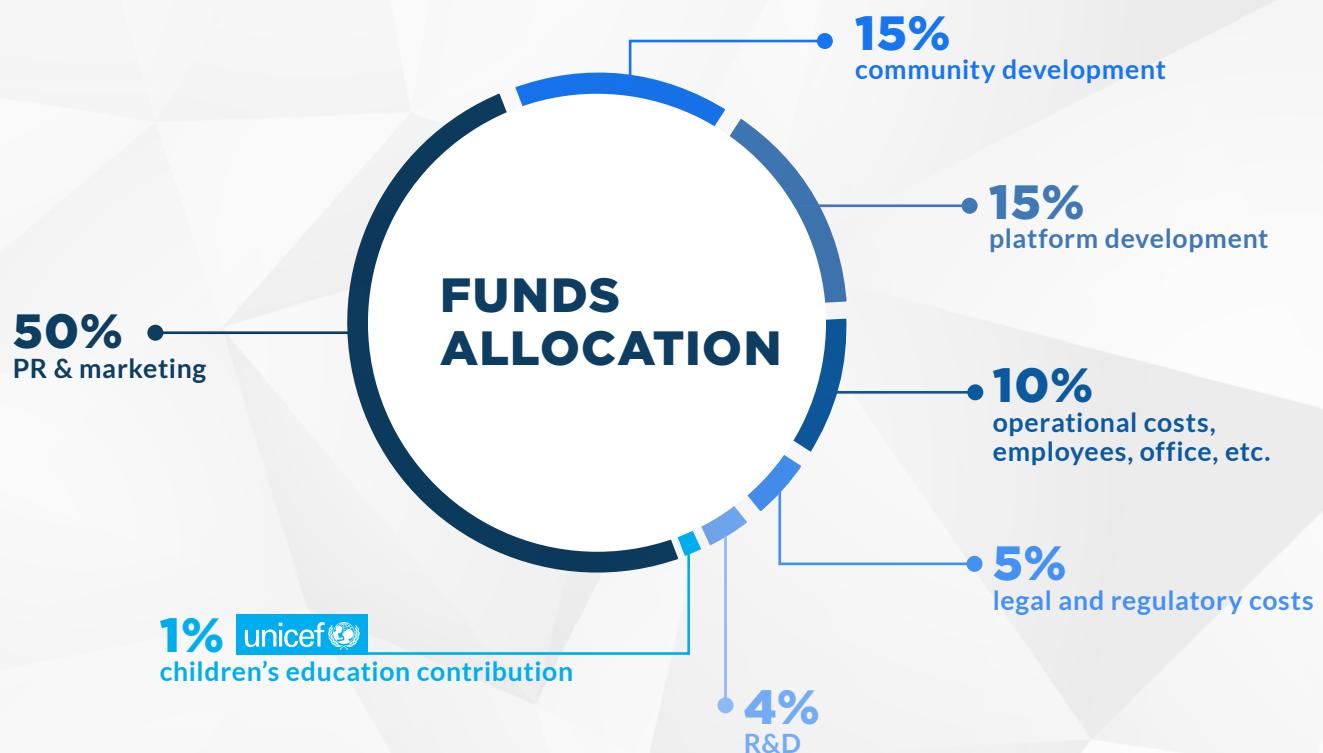

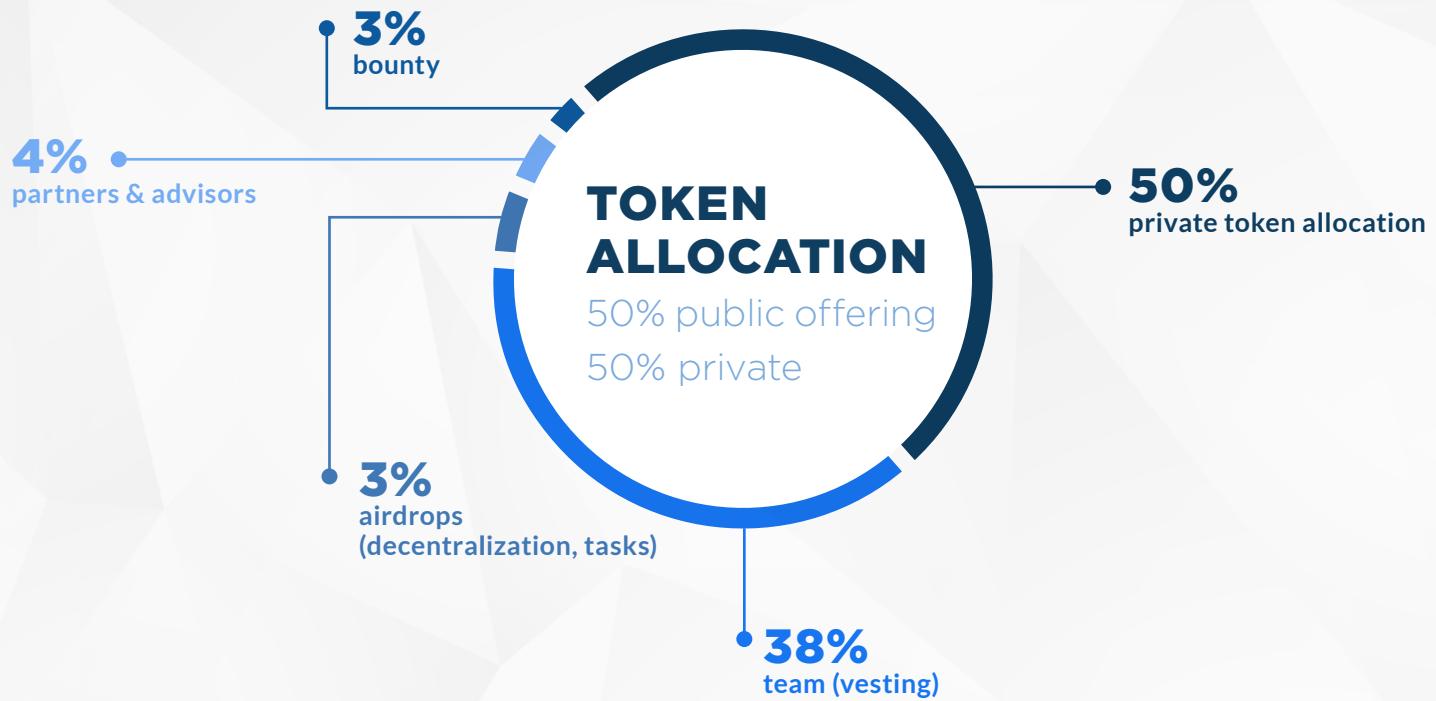

◀ Q1-Q2 2019

- Launch of Alpha version (feed and rewards)
- Implementation of neural network on collected data.
- Mobile version.

◀ Q4 2019

- Platform full release.
- Creating an analytical institute, based on current university.
